SYSTIME:

- Further extending the value that Oracle Applications deliver to customers, SYSTIME and Oracle announced availability of an Oracle Application Integration Architecture (AIA) solution that connects Oracle's Agile Product Lifecycle Management (PLM) and Oracle's JD Edwards EnterpriseOne.
- The PLM Process Integration Pack enables rapid implementations of Oracle's best-in-class Agile PLM processes integrated to JD Edwards EnterpriseOne. This integration helps JD Edwards customers reduce the cost and risk associated with typical third-party and custom PLM integrations.
- Developed in collaboration between Oracle and SYSTIME, the new integration is part of Oracle AIA, a comprehensive solution that delivers processes across Oracle, third party and custom applications.
- Since the launch of Oracle's AIA program, Oracle continues to see strong momentum across its partner ecosystem, with Systems Integrators as SYSTIME, making significant investments in strategic co-development efforts.
- These co-development efforts enable Oracle partners to obtain technical strength and insight for Oracle AIA through training, development, validation programs; and increased revenue opportunities with differentiated, low cost, fast pace and sustainable service offerings. Additionally, they can rapidly expand the number of AIA integrations available.
- SYSTIME is currently a Platinum Partner in the Oracle PartnerNetwork.

Pre-Integrated Offering Delivers Value

- Oracle AIA provides a pre-built integration between Agile PLM and JD Edwards EnterpriseOne to improve organizational transparency and accelerate innovation through better design making, accelerated manufacturing and an expedited time to market. Through this integration, customer benefits include:
 - **Pre-defined PLM transfer templates:** Predefined templates for design release of new product definition and product launch, as well as the management of previously launched products.
 - **Bi-directional data exchange:** Synchronization of engineering change status and material attribute information between manufacturing and PLM enables higher innovation efficiency.
 - **Robust error-handling and notification framework.** The integration pack provides multiple layers of validation to ensure data is accurate and properly formatted. All business rules within JD Edwards EnterpriseOne are also validated for every transaction. Exception handling for unsuccessful transactions are rolled-back and email notifications are sent.
 - **End-to-end Process monitoring.** Tracking and monitoring of the change process queue minimizes data exchange latency and ensures timely completion.

Supporting Quotes

- "Working in close collaboration with dedicated partners like SYSTIME, we continue to leverage Oracle Application Integration Architecture to maximize the value of our customers' investments," said Oracle Group Vice President, JD Edwards, Lyle Ekdahl. "We appreciate SYSTIME for stepping in to support the early adoption of the AIA from a JD Edwards perspective. We chose SYSTIME due to their industry strength and specialization in Oracle's applications. The co-development of this integration will give JD Edwards EnterpriseOne customers new tools to drive product innovation through a full design-to-release process more effective and efficient."
- "We, here at SYSTIME are pleased that we had the opportunity to work with Oracle to develop this integration; the value of this integration is enormous, with great opportunities to streamline functional and technical work in product management, engineering and manufacturing and ad hoc, point-to-point interfaces that existed in the past with a broader, more systematic, well supported mechanism that should support our customers very well for many years to come," Ramesh Subramanian, Vice President of Global Services of SYSTIME.
- "It has been an honor for SYSTIME to work with Oracle to develop an integration between JD Edwards and Agile. SYSTIME's acclaimed integration of JD Edwards and Oracle's Agile PLM tied in with many years of experience in Oracle solutions is the quintessential package for customers to accelerate time to market and optimize profitability," says Vishal Grover, President and CEO of SYSTIME.
