Sai Prasad Foods's Agriculture Business Benefits from Oracle's JD Edwards EnterpriseOne

IT Solution Will Help Optimize its Supply Chain Network Across India Oracle Partner SYSTIME Played a Key Role in the Implementation

Gurgaon, Haryana, October 27, 2009 /[India PRwire](#)/ -- Pune-based Sai Prasad Foods Ltd. (SPFL), a leading supplier and manufacturer of daily-consumed food products with a turnover of over Rs. 100 crores, has recently completed the implementation of Oracle JD Edwards EnterpriseOne Grower Management in its corporate office, manufacturing and food processing facilities covering 55 branches across 13 states in India.

- The company, which markets the 'Jayaka' & 'Feel Good' brand of food products, chose to replace its legacy ERP system with Oracle JD Edwards EnterpriseOne to allow SPFL quick access to data on crop and harvest identification for each block of land.
- With JD Edwards EnterpriseOne Grower Management, SPFL is also able to maintain historical records, track operational costs, and maintain harvest estimates for supply planning. They are able to plan and manage all farming activities more efficiently from pre-planting to post-harvest cleanup.
- SYSTIME, a Certified Advantage Partner and Oracle PartnerNetwork member played a crucial role as the implementation partner, having completed the implementation in 130 days.
- SYSTIME has been implementing JD Edwards applications for 17 years. Employing over 650 dedicated JD Edwards specialists, with expertise spanning all versions of JD Edwards product family, SYSTIME's project management and

technical skills contributed to the speedy and smooth implementation at SPFL.

- With the transition to Oracle Applications, SPFL is already reaping benefits such as:
 - Ability to better manage collection processing, marketing and distribution of agriculture and food products thereby enabling greater operational, supply chain and business efficiencies.
 - Reduction in waste and implementation of a smart distribution process for finished products, which has done away with the enormous paper work and duplication of entries that were previously required by the legacy system.
 - Enhance the decision-making capability of its senior management through estimations and analysis for profitable operations.
 - Improvement in crop utilization rates and margins with data automation that provides visibility into forecasts of yields, costs, and quality of harvested crops.
- This comes at a time when companies associated with the agriculture sector are turning to information technology solutions for better farm management. The need for adoption of better practices can be underscored from the fact that while the agriculture and the allied sector employs over 65-70% of India's population; it contributes only 22% of India's gross domestic product. Moreover tight business margins, labour supply problems, and increasing regulatory oversight have created an environment for adoption of IT infrastructure by the agriculture sector[1].

Oracle JD Edwards Enterprise One 8.12 modules deployed in Sai Prasad Foods Ltd.

- The JD Edwards Enterprise One 8.12 modules deployed by Sai Prasad Foods Ltd. include Financials Management, Sales and Distribution Management, Oracle Inventory Management, Manufacturing Management, Quality

Management and Grower Management
